The Sustainable Finance Disclosure Regulation (SFDR) determines the information and transparency obligations of management companies depending on the category of funds (Articles 6, 8, 9). The objective is to clarify the management actually implemented and eventually to put an end to "green washing". Article 6 covers funds, which do not integrate any kind of sustainability into the investment process. Article 8: Funds promoting environmental and social characteristics. Article 9: Funds with a sustainable investment objective. EdR Certified Origin Physical Gold is an ETC and is therefore not classified under SFDR.

## AN ESG-INTEGRATED INVESTMENT APPROACH

- ▶ To identify potential candidates for inclusion, our Responsible Investment team, composed of four experienced professionals with over 26 years' experience, rates Smelters, Mines and mining companies according to key ESG themes and financial materiality.
- ▶ Gold's supply chain is rigorously assessed using over 60 individual criteria to ensure ESG suitability. In parallel, country risk is also determined by reviewing social and environmental norms.
- ▶ Traceability assurances are equally crucial to the investment process and 100% traceability from mines to vault forms part of our discussions with partners.
- ▶ Crucially, the process is verified by a third party auditor.

## OUR KEY ESG THEMES AND FINANCIAL MATERIALITY AREAS

- ▶ The key ESG themes assessed for each smelter, mine and mining company are broadly:
  - the direct environmental impacts of the activity, like water & waste management
  - supply chain processes including human right violations or extraction & recycling
  - health and safety guidelines with employee and contractor conditions assessed.
- ▶ The smelters', mines', and mining company's financial materiality are determined by looking at the business model, governance and the quality of the management team as well as the candidate's intangibles like reputation among peers and professional memberships.
